

Nadeem Ahmed

ahmed.nadd@outlook.com | (+91) 988-6115927 | Bangalore, IN | [LinkedIn](#)

Senior Frontend Developer with 5+ years of experience building scalable web applications, SDKs, browser extensions, and real-time data systems. Specialized in React, TypeScript, performance optimization, and visual workflow systems. Experienced in building complex UI engines including graph-based flow builders.

WORK EXPERIENCE

Bureau

April. 2025 – Present

Senior Frontend Developer

Bangalore

- Leading frontend development of [FaceGuard AI](#), a browser-based liveness detection application built from scratch.
- Integrated Google MediaPipe models for real-time client-side facial detection achieving ~80% liveness accuracy.
- Contributed to React + React Flow-based no-code Flow Builder for identity lifecycle journeys.
- Engineered node management logic and implemented a custom graph auto-layout algorithm to dynamically position nodes and optimize readability.
- Improved rendering performance for large node graphs using memoization and controlled state updates.

Softway

Aug. 2024 – Feb. 2025

Software Engineer II

Bangalore

- Optimized React rendering lifecycle and API handling, improving First Contentful Paint (FCP) and overall load performance by 20%.
- Reduced unnecessary re-renders via memoization strategies and component restructuring.
- Designed and implemented an internal SCSS component library to standardize UI design across projects, improving maintainability and reducing styling redundancy.

Holofy

Feb. 2021 – July. 2024

Frontend Developer

Remote

- Contributed to building the [SOME1](#) desktop app, an AI-powered workforce platform, by implementing core Electron functionalities for data syncing and asset management.
 - Developed a canvas feature allowing users to upload and reuse assets for AI workers, significantly improving workflow efficiency.
 - Built dynamic React components that responded to real-time socket data, and implemented tab management system with active state handling and a context menu for seamless navigation.
- Developed a Chrome extension for LinkedIn from scratch using React.
 - Built a web scraper to dynamically extract relevant information based on user actions, enhancing targeted data retrieval.
 - Designed the client-side architecture, integrated authentication, implemented analytics, and handled continuous improvements through bug fixes and feature enhancements.
 - Earned the “Featured” badge on the Chrome Web Store by consistently adhering to best practices and performance standards.
- Built the user interface for the [Holofy Widget](#) using React and Context API for state management.
 - Integrated Shadow DOM for component encapsulation and modularity, implemented Mapbox with advanced filter logic and interactive map pins.
 - Optimized performance for low-end mobile devices by minifying assets, optimizing images, and caching API responses -ensuring smooth, cross-browser functionality.
- Led the development of the [Holofy Widget Dashboard](#) using React, collaborating with the backend to structure APIs. Enabled users to visualize data from the data lake as charts using the Recharts library.

Lirisoft

Jan. 2020 – Feb. 2021

Frontend Developer

Bangalore

- Implemented and maintained UI for Verizon Message+ desktop app, managing role-based access with local/session storage, and built emoji reactions for messages, used Context API for state management.

EDUCATION

Visvesvaraya Technological University

Aug, 2016

Bachelor of Engineering, Computer Science

Bangalore

SKILLS & INTERESTS

- **Skills:** React, Javascript, Typescript, HTML, CSS(SCSS), Tailwind, Material UI, Responsive web design, Electron Js, Redux, Zustand, Context API, Next Js, Webpack, Vite, Git, Figma.
- **Interests:** Bike Ride, Reddit, Dota2, *Seinfeld*, *Office*.
